Engineering / Cloud & DevOps	8+ years	Full-time

About Viamagus Technologies

Viamagus Technologies is an AI-powered, design-led technology company focused on delivering innovative digital solutions. We work across technology, product engineering and digital transformation, helping businesses build and scale impactful solutions.

About the Role

We are looking to connect with experienced Senior Software DevOps Engineers with strong expertise in designing, automating and maintaining CI/CD pipelines and cloud infrastructure. The ideal professional brings extensive hands-on experience with AWS, Infrastructure as Code, application build and deployment automation, and DevOps practices across Windows and Linux environments.

Primary Responsibilities

- Design, build and maintain CI/CD pipelines for web, desktop and mobile applications.
- Automate application build, signing, packaging, release and deployment processes using Azure DevOps and related tools.
- Automate AWS infrastructure provisioning and configuration using Infrastructure as Code (IaC).
- Collaborate with development teams to improve application build and deployment workflows.
- Monitor and enhance system reliability, availability and performance.
- Manage Git repositories, version-control practices and branching strategies.
- Troubleshoot and resolve build, infrastructure, system and deployment-related issues.
- Implement security best practices across development, infrastructure and deployment processes.
- Identify opportunities to improve automation, operational efficiency and release management.
- Ensure consistent and reliable deployment practices across Windows and Linux environments.

Required Qualifications

- Bachelor’s degree in Computer Engineering, Computer Science or a related discipline.
- 8+ years of engineering experience with strong exposure to DevOps and cloud infrastructure.
- Hands-on experience with AWS services, including Amazon EC2, S3, Lambda and RDS.
- Experience with CI/CD platforms and tools such as Azure DevOps, Jenkins and GitLab CI/CD.
- Strong understanding of Git, version control and branching strategies.
- Experience with Infrastructure as Code (IaC) using Terraform or AWS CloudFormation.
- Scripting experience using Python, Bash or PowerShell.
- Experience supporting application builds and deployments across Windows and Linux environments.
- Strong troubleshooting, problem-solving and collaboration skills.

Preferred Qualifications

- Experience with Docker and Kubernetes.
- Familiarity with monitoring and observability tools such as Prometheus, Grafana and Amazon CloudWatch.
- Experience with iOS or Android application build and deployment processes.
- Experience in the medical device industry or other regulated industries.
- Understanding of security practices, vulnerability management and risk analysis.
- Experience implementing secure CI/CD workflows and deployment automation.

What We Value

- Strong technical ownership and problem-solving abilities.
- Ability to collaborate effectively with cross-functional engineering teams.
- A proactive approach to automation and continuous improvement.
- A strong understanding of software delivery and infrastructure reliability.
